### **DETAILED ACTION**

This is a non-final Office Action for application number 10/755,524 Vent Cover Bracket and Process therewith, filed on 1/12/04. Claims 1-4, 8-15 and 17-24 are pending. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 7/24/06 has been entered.

### ***Claim Rejections - 35 USC § 102***

Claims 1-4, 8-15 and 17-24 are rejected under 35 U.S.C. 102(b) as being anticipated by United States Patent No. 4124444 to Jabsen.

The patent to Jabsen teaches a rectangular plate (14), having front and back faces, and a length and a width, and opposing edges (2a, 2b) extending in respective length and width directions, at least two openings (26, 28C) in the plate (14), each opening (26, 28C) which are completely through the plate and wholly contained within the front and back faces so as to not intersect with the side edges and wherein the at least two openings consist of only a single row and of slots having a length extending parallel to the length direction of the plate and the slots are each located on a center

Art Unit: 3632

axis of the plate relative to the length direction of the plate and at least one pair of orifices which are notches (18, 19) associated with opposite sides of each slot and having a length extending parallel to the width of the plate and are located adjacent opposite side edges, and opposite sides of at least one of the two openings (26, 28C) and midway between opposite ends of the opening, and which extend completely through and intersect the side edges of the plate along the length of the plate, the notches (18, 19) extending into the plate toward the center axis of the plate relative to the length direction, wherein the notches do not intersect the adjacent opposite side edges and do not intersect at least one of the slots and intersect at least one of the slots, wherein the notches form a weakened zone associated with each slot which is perpendicular to the length direction. Jabsen also discloses that the orifices (5) can be four in number and wherein each pair of orifices is located on opposite sides of the openings and midway between opposite ends of the one opening and a second pair of orifices is located on opposite sides of a different opening of the two openings and midway between a first end of the first opening and a second end of a different opening. Note, the process steps were not given structural or apparatus claim weight.

### ***Response to Arguments***

Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.
